PARTICIPANTS: Dante Rodriguez (EPA), Ginny Hatch (YPT), Dietrick McGinnis (McG&A), Sarah Peters (McG&A), Dave Seter (EPA), Chris Dirscherl (EPA), Cynthia Ocegüera (WRPT)

Redline = followup items

Sitewide: regular monthly call day/time, change due to Dave's regular day off, make it 1st Thursday monthly at 10a, agreed. Dave, if need more time, can start earlier since have standing 11a team meeting. Dante will change calendar event.

Community meeting, Ginny trying to connect with Sarah Cafasso, get fliers to announce meeting cancellation. Dave, not yet rescheduled, Dave will followup with Sarah today. Dave, dispel rumor that NDEP is backing out of NPL support.

Dietrick revising whole YPT tribal QAPP, comprehensive except air.

Geothermal release. Cynthia, January release by geothermal company into Wabuska drain (and presumably Walker River), citation by NDEP, cease and desist order, Cynthia forwarded to me and Veronica Swan, no further action yet (sampling or mitigation), wastewater release, 40.1 million gallons, facility supposedly bot followup, look into it. Dietrick, proposes taking samples, heavy metal samples keep long time, could take samples now and figure out how to analyze later. Dante, tribes should call EPA later to discuss ideas for lab analysis. Dietrick field inspection release area, 9a Monday 6/6, meet at Wabuska Bar, take samples, Cynthia OK, Ginny ok?

OU1: Dave, FS RAO discussion, call, Tuesday June 7 10:30a-12, discuss high level issues, kick-off discussion, working session at another in-person meeting later. Ginny probably can't make it, Dave could catch her up later. Cynthia ok, Dietrick ok.

Dave, June 29 groundwater OU technical meeting, geochemistry and background. Dietrick, Sarah will attend, Earl Dixon on phone, Dietrick out of town. Dave, Acree didn't have any significant comments on bedrock TM, significant comments on geochem and background. Dietrick, looking for more ARC work on tribal wells, aquifer tests, tracer tests, to know

when contaminants will reach tribal land. Dave, will have sidebar with Acree to see if he supports tribe idea for additional well work. Earl and Sarah will try to connect with Acree beforehand.

Chris, risk assessment, holding off on proceeding until June 29 groundwater meeting where CSM items will be discussed, Chris will attend that meeting.

OU3: Dave, ARC has showed us TOC, is assembling RI report. Chris, risk assessment, ARC conversations, responses to comments, sub-area specific risk assessment agreed to as well as OU-wide, outstanding issue VLT and how it plays into risk assessment, VLT material is on almost all of OU3 to some extent, how to address VLT risk is question to resolve, had been used for multiple purposes over site. Dietrick, is uranium the issue with VLT? Chris, could be a part but don't know. Dave, more than uranium will contribute to risk, will be comprehensive calculation including all contaminants.

OU4: Dave, next phase field work scheduled to begin next week, Dave will share schedule with tribe, mobilize next week, CBI will do some field oversight, asked them to coordinate with others who might join in with field visits.

OU7: Dante, EPA splits received, awaiting ARC data, Jack checking status, Dante to followup with Jack. Dietrick, radiological results could take long time for counts, see if they can separate the two, rad vs. non. Dietrick, would like to receive lab results from EPA splits, Dante will send.

OU8: Dante, EPA working with BLM on MOU(s), meeting to define roles and responsibilities of EPA, BLM, NDEP; NDEP lead in preparing PP/ROD.
